

# ANJU KUMARI

Frontend Developer — React.js & Node.js

## PROFESSIONAL SUMMARY

Results-driven Frontend Developer with 6+ months of hands-on experience architecting and delivering scalable web applications using React.js and Node.js. Adept at building high-performance REST APIs, dynamic single-page applications, and seamless end-to-end solutions. Proven track record of improving system uptime, enhancing user experience, and collaborating with cross-functional teams to ship production-grade software on time.

## TECHNICAL SKILLS

|                |                                                                                                                |
|----------------|----------------------------------------------------------------------------------------------------------------|
| Frontend       | React.js, JavaScript (ES6+), TypeScript, HTML5, CSS3, Bootstrap, Redux, Context API                            |
| Backend        | Node.js, Express.js, REST APIs, XML-based APIs, JWT Authentication, Middleware Design, MVC Architecture, Axios |
| Database       | MongoDB, Mongoose ODM, Database Schema Design, Aggregation Pipelines                                           |
| Tools & Others | Git, GitHub, VS Code, Postman, Zoho Catalyst, npm, Webpack, ESLint, Chrome DevTools, Visual Studio 2022        |
| Soft Skills    | Problem Solving, Agile/Scrum, Team Collaboration, Code Review, Technical Documentation                         |

## PROFESSIONAL EXPERIENCE

### Full Stack Developer | Graspcon Technology | 2024 – Present

- ▶ Working on enterprise-grade integrations and full-stack web applications using Node.js, React.js, and REST/XML-based APIs.
- ▶ Developed Sage Intacct to CINC financial integration automating invoice and payment synchronization, eliminating manual accounting effort.
- ▶ Implemented Zoho Catalyst cron-based automation for scheduled daily payment sync between two enterprise financial platforms.
- ▶ Handled complex dual-API integration (REST + XML) for Sage Intacct, resolving data mapping and validation challenges.
- ▶ Engineered ACH payment handling and approval workflow automation (one-time and permanent Ready-for-Payment) using API-driven logic.
- ▶ Collaborated in a team of 2 to deliver the integration on time with zero production-critical errors post-deployment.

### Frontend Developer | Ultratech Cement Ltd. | 2023 – 2024

- ▶ Architected and maintained enterprise-grade web interfaces using React.js, serving 1,000+ internal users across departments.

- ▶ Engineered reusable component libraries with React.js (Hooks, Context API) reducing UI development time by 30%.
- ▶ Maintained 99% application uptime by implementing robust error handling, performance monitoring, and proactive debugging.
- ▶ Developed RESTful API integrations with Node.js/Express.js backends for real-time data synchronization across dashboards.
- ▶ Optimized rendering performance via code-splitting, lazy loading, and memoization (React.memo, useMemo, useCallback).
- ▶ Participated in deployment pipelines, cross-team code reviews on GitHub, and Agile sprint planning.

### **Frontend Developer Intern** | Codsoft | 2022 – 2023

- ▶ Built and deployed 10+ responsive web pages and SPAs using React.js, HTML5, CSS3, and JavaScript.
- ▶ Developed interactive UI components improving user engagement and experience for 100+ end users.
- ▶ Integrated third-party APIs and handled asynchronous data fetching using Axios and Fetch API.
- ▶ Gained hands-on experience with Git workflows, Pull Requests, and collaborative development best practices.

## **KEY PROJECTS**

---

### **Sage Intacct to CINC Integration** | Node.js · Axios · REST & XML APIs · Zoho Catalyst

- ▶ Designed and developed an automated financial integration between CINC and Sage Intacct, eliminating manual invoice creation and payment reconciliation for an accounting & real estate domain client.
- ▶ Integrated both REST and XML-based Sage Intacct APIs to fetch invoice headers, line items, and PDFs, then pushed them into CINC — handling complex data mapping and validation across two API paradigms.
- ▶ Automated full payment sync from CINC to Sage Intacct, including ACH payment handling and API-driven Ready-for-Payment approval workflows (one-time and permanent).
- ▶ Implemented Zoho Catalyst cron job for daily scheduled automation, ensuring real-time financial consistency and reducing manual accounting effort by ~80%.
- ▶ Improved audit readiness by centralizing financial data flow and eliminating payment status mismatches across both platforms. Team size: 2.

### **Countries Explorer** | React.js · REST API · React Router

- ▶ Developed a dynamic single-page application that lets users explore all countries with detailed profiles including population, currency, and borders.
- ▶ Integrated the REST Countries API with real-time search, region-based filtering, and country-detail routing using React Router v6.
- ▶ Implemented dark/light theme toggle and responsive design using CSS modules, achieving 100% mobile compatibility.
- ▶ Optimized API calls with debounced search (useCallback + setTimeout) to reduce redundant network requests.

### **Expense Tracker** | React.js · Node.js · Express.js · MongoDB

- ▶ Built a full-stack personal finance management application enabling users to add, categorize, and delete transactions in real time.
- ▶ Designed and implemented a RESTful Node.js/Express.js backend with CRUD endpoints and data persistence via MongoDB.

- ▶ Created interactive monthly expense charts using a charting library, giving users visual insights into spending patterns.
- ▶ Implemented JWT-based user authentication for secure, personalized financial data management.

### **Task Management Dashboard** | React.js · Node.js · Express.js · MongoDB

- ▶ Engineered a multi-user task management system with role-based access control (Admin, Manager, Employee).
- ▶ Built drag-and-drop Kanban board using React with real-time task status updates via REST API.
- ▶ Developed full backend with Express.js including middleware for authentication, request validation, and error handling.
- ▶ Deployed on cloud with environment-based configuration management for dev and production environments.

## **EDUCATION**

---

### **Master of Computer Applications (MCA)** | RGPV University | 2022 – 2024

Relevant coursework: Advanced Algorithms, Web Technologies, Database Management Systems, Software Engineering.

### **Bachelor of Science (B.Sc. Computer Science)** | DAVV University | 2019 – 2022

Foundation in programming, data structures, computer networks, and object-oriented design.
